NMS PRO (News Management System Pro)

OFFICIAL TECHNICAL & OPERATIONAL OVERVIEW

By Navaneeth Media Service Private Limited

---

1. SOPHISTICATED ADMIN INTERFACE

The **NMS PRO Admin Console** is engineered specifically for high-pressure broadcasting environments.

- **Real-time Dashboard:** Features a persistent navigation bar for **Channel Identity** and critical **System Notifications**.
- **Custom Logic:** Administrators can define granular local storage paths for incoming news, breaking alerts, and media assets, ensuring seamless integration with existing station workflows.

2. PROPRIETARY SYNCHRONIZATION ENGINE

Our advanced sync technology bridges the gap between the field and the studio.

- **Zero-Latency Transfer:** Content dispatched from any location reaches the Admin Panel in seconds.
- **Automated Cataloging:** Based on the reporter's metadata (Location/ID), files are automatically routed to pre-assigned local directories for instant broadcast availability.

3. LIVE STREAMING & BROADCAST INTEGRATION

NMS PRO transforms field reporters into mobile broadcast units.

- **Dynamic URL Keys:** The system generates unique, location-based stream keys optimized for professional playout engines such as **vMix, OBS, and Wirecast**.
- **Seamless Transitions:** Enables instant "Field-to-Air" transitions with minimal buffering and high-definition stability.

4. INTELLIGENT BREAKING NEWS & TICKER MANAGEMENT

Data handling is categorized with surgical precision:

- **Breaking News (XLSX):** Field inputs are structured into an Excel framework, automatically segregating "Location" and "Content" columns for clear visual presentation.
- **Scrolling Ticker (RAW TXT):** High-speed text delivery for lower-third tickers.
- **Smart Ad-Insertion:** The system features a fail-safe **"ADD.TXT"** logic. If no field data is active, the system automatically cycles pre-configured channel advertisements to ensure constant screen activity.

5. SMART STORAGE & ARCHIVAL POLICY

Designed for high-speed production, the system employs a **30-day active rotation policy**.

- **Note:** NMS PRO is a production management tool. While it holds data for 30 days, manual archival is recommended for permanent storage of critical historical content.

6. ADVANCED ADMINISTRATIVE CONTROLS

- **Global Brand Management:** Remotely update the Mobile App Logo and broadcast internal staff notices or display advertisements directly through the admin interface.
- **Reporter Enrollment:** Integrated system to register staff, generate unique IDs, and create **QR-coded Digital Press Cards** for instant field verification.

7. SECURITY & MAINTENANCE PROTOCOLS

- **Hardware Binding:** Every Reporter ID is securely bound to a specific hardware device (HWID), preventing unauthorized access and ensuring data integrity.
- **One-Click Ecosystem:** Integrated license tracking and an automated update system allow users to download and deploy the latest security patches and features directly.

NMS PRO FIELD APP: EMPOWERING MODERN JOURNALISM

Mobile-First Reporting Solution

- **Reporter Dashboard:** Displays unique Official ID, Assigned Reporting Zone, and Professional Designation.
- **Multimedia Dispatch:** One-tap synchronization of high-definition videos, images, and structured news scripts.
- **Digital Identity Card:** Secure, in-app Digital ID with QR verification for official field credentials.
- **Emergency Live Broadcast:** Engineered for low-bandwidth stability, allowing HD live feeds even in challenging field conditions.
